## Tape pressing machine Model BAD 1

This machine is used for pressing cement tapes after the marking of contours of shell soles, especially by using fat curried leather. Further on the machine presses the edge of soles. If soles on which the lining is loose are stitched manually the lasted shoe can be pressed with this machine without any problems and without folds after the heat setting process.

The machine can be easily operated and convinces concerning price and result.

All sizes of shoes can be operated without need of changing the moulds.

A special rubber fits to all kinds of contours.

### Serial equipment of the machine:

- Adjustment of the pressing period
- Adjustment of the working height
- Machine movable on wheels
- Release by manual switch
- Emergency-cutout switch
- Adjustment of pressure

### Technical details:

width, depth, height	420x650x900
packing dimensions	550x750x1070
pneumatical contact	1/4"
air consumption per pair	18 Ltr./ Takt
weight gross (crate)	140 Kg (Verschlag)
weight net	80 Kg
